

For the Gardener: Wonderlite® has been used successfully to bloom and grow all types of orchids, hibiscus, geraniums, roses, African violets, and other flowering houseplants. Position Wonderlite® 2 to 8 feet from plants (much farther distances than for fluorescent lighting).

For the Interior Landscaper/Nurseryman: Wonderlite® is a superb plant growth light that doubles as display lighting. Well suited for flowering or large display plants. Illuminates floor or wall gardens easily. Long-life bulb (10,000 hours) is cost effective and can be used in incandescent sockets.

WONDERLITE® SPECTRAL CHART

COLOR SPECTRUM AND PLANT GROWTH: Wonderlite renders an excellent balance of blue, red, and far-red wavelengths of the visible light spectrum (440, 660, and 740 nanometers). These spectral characteristics ensure healthy plant growth and abundant flowering.

I highly recommend the Wonderlite®. We use it in the hotel lobby over Ficus and grape ivy. The plants are thriving and the lobby is gorgeous.

— C.B, Jekyll Island, GA

Having the Wonderlite® has enabled me to grow tropical palms, orchids, banana trees, and other exotic plants with spectacular success. The growth rate is surprising and all my plants look healthy and lush.

— V.D., Chicago, IL
